

Ultraviolet Sanitizing Lid Placer

42430 Blacow Road, Fremont, CA 94539
(510) 651-7350 www.DataScale.com

Container Size	Output
2-1/2 to 7-gallon Pails	25 per Minute Maximum
Pneumatic Requirements	Electrical Requirements
80 to 110 P.S.I. - 3 C.F.M. @ 35 to 105 degrees F	Not Required

LID PLACER with UV Lid Sterilization

Automatically places plastic lids onto pails.
Continuous motion. Manual lid magazine.

502-IL with UV Pail and Lid Sanitation

*Available UV Pail Sanitation System Feature

Effectiveness of Ultraviolet (UV) Sanitation Systems is by killing unwanted bacteria particles. Ultraviolet light is considered germicidal due to its ability to effectively eliminate bacteria. Without getting too into specifics, UV radiation earns this classification by emitting a wavelength that falls between 200 and 300 nanometers. When light that exists in that spectrum is shined on bacteria, viruses, and other pathogens, it deactivates their DNA, destroying their ability to multiply and killing them

Data Scale's Lid Placer cuts costs and increases efficiency by eliminating the need to manually pry, pick, position, and place lids on pails. Operating at speeds up to 80 lids/minute the Data Scale Lid Placer adjusts to handle a wide variety of different size and shape containers. The Data Scale Lid Placer integrates with our high-speed Roll Through Lid Press for optimum throughput and minimal labor.

Since 1973, Data Scale has been the industry leader in liquid net weight filling equipment for food and chemical industries. Data Scale is the oldest continually owned and operated manufacturer of liquid net weight drum & pail filling equipment in North America. Data Scale can provide application system integration, providing innovative real-world solutions for your liquid filling and automation needs.

Data Scale is a winner of the prestigious Vaaler Award, given by the Chemical Processing Industry, for innovative product design.

PMMI members are globally renowned for making the highest quality equipment, offering responsive service and committing to meeting their customers' needs. That is why one out of every four machines sold around the world is made by a PMMI member company
